Abstract

This author had conducted deep case by case well known cases on aberrations of xx—xy female gender theory and produced novel method and actual case study data on developments of human biology revealing facts of gynecological concern. The study enabled, in due course, brought new perfection in the original discovery and brought several innovative advancement in human reproduction biology. The study on the pondering situation became highly attractive and novel in terms of data sets, revealing health of parents, both mother as well as fathers and produced results of gynecological curiosity. Seeing the widespread interest and coming of innovative advances the Author took the present study to bring up follow up upcoming of updates on scientific developments for broader disseminations revealing the additional scientific facts of gynecology. The study enabled bringing many scientific facts for backing of prevailing customs and initiatives such as Genetic Sustainable Legacy Conservation Fasting>>Healthy Family New World (GESLICOFAST>>HFNW) to end up misbalances in genders in families and **keep** ancestral legacy umbrella protections with social family harmony. It also envisioned launching of a new scientific research journal entitled, "Towards the Better World". These initiatives will bring gender balanced parity and many inherent benefits. The study sets right policy and carves path for accomplishing objectives of Sustainable Development Goal (SDG) of the United Nations.

Keywords: *Gender misbalanced family, Prismatic gender balancing, developing designer baby by choice and not by chance. Improving individual personality to be able to manage its unforeseen perplexing situations induced by indogenic as well as exogenic factors. Maintaining sustainable legacy and harnessing multiple benefits.*

Introduction

Human biology is evolved in its natural indiscriminate process. People get contented with whatever genders born as God's will. For this reason people seek blessing of their own trusted gods for cherished blessings. On the other hand in 19th Century *Savitri Bai Phule* known to be the first social reformer launched many social reforms for reducing atrocities towards women and girl children [1]. Wilson and Stevenson first discovered xx-xy (female and male) gender theory in early years of 20th Century ie 1905 Singh, 2016 [2]. This theory became scientific basis for people to believe in science. However, there occurred plentiful aberrations in the expected results as expected from the scientific theory, which made people losing trust in the

scientific theory, making theory leaving the ground. This author had carried out case by case deep well known cases's studies on aberrations as pondering situations in year 2021 i.e. after a lapse of about one and a quarter Century after the coming of original discovery[3]. This study enabled bringing innovative advances in the human biology. This study revealed many important aspects of scientific facts of gynecological concern.

The World Economic Forum (WEF) released its report on gender gap index on June 15, revealing India slipped down to 129th position in the list of 146 countries of the world. India closed 64.1% of gender gap against all country's score 68.5 %. While no country had full gender parity, 97% of economies have closed more than 60% of the gap compared to 85% in 2006. There were tremendous curiosities on

further follow-ups after the pondering study of the author in 2021 [3]. It had made several advancements brought on the World scenarios of human biology. In view of such advancements the present study was taken up to bring followup report advances in human biology.

Materials and Method

The author had brought plentiful aspects in human biology, which was brought out here under different sub heads.

Past facts about genders births

The development of genders occurred as an unplanned natural evolution of pleasure and enjoyment in life course. There existed a belief that that gender get decided as per the Gods will, hence whatever gender took birth were accepted as God's will ie one automatically get motivated to follows the famous Darwin's theory of natural courses of least path of resistance, as it happens in development of river courses. People remained contented with the developing genders. Many things depended on customs and people followed it as paramparas.

The atrocities towards women and girl children

In the sailing with Customs or Paramparas there occurred plentiful atrocities towards women and girl children. *Savitri Bai Phule* [1] was a first social reformer who launched many initiatives. These atrocities were harsh and *Savitri Bai Phule* brought social reformations which had lot of healing impact in society and way of life of the people.

The xx-xy (female –male) genders.

In early part of the 20th Century an original discovery of xx-xy (female-male) gender theory [2] was discovered. This scientific theory served as a scientific basis giving scientific bases and initiating scientific thinking on gender developments. Author's studies [3] brought pondering situation and the study enabled bringing new perfection [4] in original gender theory. In view of the inspiration from the book [5] author brought new prismatic gender balancing with a view to overcoming mis balance in the genders and many sociological difficulty creating customs in parampara and society [6]. The prismatic gender balancing overcome the helplessness situations and brought new empowerments in women and girl children, overshadowing all social welfare projects run by the state government institutions. An exemplary benefit recounting study was publishing for the developed country Japan [7] where the birth rates have tremendously gone down and country endeavoured to bring many curative

policies.

Case appraisal of the resulting mis misbalances in genders

As reported in previous section of the present study, there occurred plentiful aberrations in the expected results of gender development and resulting mis balances in the genders in families. This author had brought a pondering study of gynecological concern [3] and deep case by case studies of well-known cases with actual data on human biology. This unique study with actual data attracted wider readerships interest of global gynecological concerning interests. In view of this subject brought new perfection in the theory and studies beyond, which proved eminent advancement in the human biology. This fact and many other scientific benefits and gains, this author undertook the follow up review study to disseminate with supplementing logics the advancements in the interesting features on human biology. Those cases are briefly presented here in the present study to equip all readerships comprehend and become able to appreciate the upcoming advances in the human biology in the following sections of the present study. This study produced many interesting aspects of human biology on prismatic and maintenance of social [6] legacies forever [7] developments results which will be presented in the result part of the study.

Associated health hazards of genetic features

There occurred different genetic indicating disorders in health of parents, these situations resulted in deprivation of parental umbrellas to their children [6], which caused many social customs and society's mal functioning. The study on pondering cases also revealed genetic and gender related health ailments [8] Thus, the pondering study enabled finding indicators and linking genetic diseases and causing plentiful social setbacks.

New initiatives to overcome such aberrations and harness benefits of balanced family

Under the beyond studies this author had brought many initiatives to bring gender balances in the gender mis balanced families and enabling freedoms from such genetic health ailments [7]. This initiative is poised to bring new healthy world. Study brought new vision on development of bad personality which occurs due to biological shocks [9].

Benefits of natural gender balancing and harnessing multiple benefits

The detailed development in study under the reference [5] could flourish in resulting plentiful new

facts of gynecological concern [10], [11].

New genomic food to assured maintenance of life course sailing healthy umbrella

In the new initiatives this author had prescribed follow up of genetic food menus by both female and males in family together. The new genetic food will bring still better results from the genetic prospects point of view, which makes a unique genetic advancement in human biology.

Bringing real gender gap parity benefits to the societies better than those proclaimed by the World Economic Forum

The mis gender balanced families having benefits of the prismatic gender balancing will get themselves enabled as individual families will be able to maintain social legacies and get enriched in accomplishing sustainable development goals of the United Nations, getting benefits of ancestral resources and different kind of revamped natural resource in starting in lieu of remaining in situation from where one will have to start from scratch in earning their means of living. The gender gap will get brought to parity level at the soonest possibility.

Results

Gender evolution situation in previous Centuries

The knowledge about the development on evolution occurred by natural process of evolution dragged by jokes, criticism, blogs and free styles of gossips etc which could not be based on any scientific fact. Things developed by seeing and believing. A light gentry created some customs and gave nomenclatures of *paramparas*.

Existence of atrocities towards women and girl

Table 1. Aberrations in xx-xy (female-male) gender having only daughters

S.No	Genders		Other attributes			
	Male	Female	Living standard	Offsprings	Amelioration	Sociological situation
1	M4	F7	Normal	3 daughters	Non ameliorated	pondering situation
2	M6	F9	Normal	3 daughters	Non-Ameliorated	pondering situation
3	M7	F10	Average	3 Daughters	Female had mental disorder	2 nd daughter had some disorder
4	M5	F8	Normal	4 daughters	Non ameliorated	pondering situation
5	M8	F11	Normal	8 Daughters	Non ameliorated	Pondering situation

Subscripts M and F are arbitrary. They merely signify different identification in array.

Aberrations in the xx-xy (female-male) theory, social and family health having only male children

The author had brought losses and problems those arrive due to mis balance in genders of family

children

Savitri Bai Phule [1] was known as a first lady social reformer who launched campaigns to alleviate atrocities prevalent in the *Paramparas*. This initiative developed in the 19th Century. A commemoration day is observed on Jan 3 every year for the contribution of the *Jyotiba and Savitri Bai Phule*, especially in *Maharashtra*, State of India.

New discovery of gender theory

Wilson and Anderson, brought new discovery of xx-xy (female-male gender) theory in the early years of 20th Century (1905) [Singh, 2016] [2]. This theory become a new scientific basis to think about the development of human genders,

The aberrations rendered people losing trust in the theory

The aberrations in the expected results of the theory impacted reduction in the scientific trust in the impact of theory leading the the ground. After one and a quarter century back since the inception of the original discovery of the gender theory well known actual case study of gender mis balances brought by this author, which highlighted the pondering situations on the aberrations in the original discovery of 1905, was published in 2021[3].

New scientific facts of genetic disorders

case study on mis gender balanced families having only female children and no male child

The study includes cases of actual data in the mis balances in the genders in the families. The misbalanced in family leads to loss of family ancestral physical capital and intellectual and specialized skills dealt with in detailed study of the author for Switzerland [14].

presented in study for Switzerland. There occur aberrations signifying that in cases where no aberration implicates those such aberrations cannot be avoided. There are plentiful issues in due to misbalance in the genders.

Case studies on gender balanced family

The cases listed in Table 3, were ameliorated cases having equal nos of genders. Raising children in such gender-balanced families is less strenuous due to social implications as the children grow than those in misbalances families, as established in studies [3],

[4]. It is implied that the development of a balanced family is ideally felt need for communities and societies. A balanced family solves social problems to a greater extent [10],[11]. Existing misbalance in individual family scenario was brought out by a daily newspaper [3].

Table 2. Misbalance in family having only male children

S. No	One male and one female with natural developments producing only son					
	Male	Female	Living standard	Offspring	Health of parents	Social implication
1	M22	F25	Normal	1 Son	Male had bald head	It becomes signal that the offspring will be son
2	F24	F26	Normal	1 Son	Male had some mental disorder	It becomes signal that the offspring will be Son
Coples having on some had invariably bald head.						
3	M13	F16	Normal	2 Sons	Male with Migraine	Needs ameliorative measures
4	M14	F17	Normal	2 Sons	Female suffered mental disorder	Family could not provide continued mother care.
5	M17	F20	Normal	2 sons	Male bald head, female died at early age	Family could not provide continued mother care.
6	M18	F21	Normal	2 Sons	Female suffered severe disease	Family could not provide continued mother care.
7	M19	F22	Normal	2 Sons	Male disorder season change	Needs measure to overcome
8	M20	F23	Normal	2 Sons	Male suffered baldness	Confirming baldness
9	M21	F 24	Normal	2 Sons	Male had baldness	Confirming baldness
Coples having two sons had baldness in males and mental disorders of females aswell as males migrains and and headache						
10	M11	F14	Normal	3 Sons	Father had severe headache	Stone in gall bladder
11	M	F	Normal	3 sons	Mother suffered mental disorder.	Stone in gall bladdeer
12	M	F	Normal	3 sons	Father bald head and mother suffered mental dis order.	Both father and mother suffered mental disorder
In the family groups, both father and mother suffered mental disorders.						
13	M15	F18	Normal	4 Sons	Male baldness and Female mental disorder	Family could not provide continued mother care.
Fathers had headache, father bald head and mothers with mental disorderds						
14	M12	F15	Excessive non veg eatereat	5 Sons	Male with baldness	Having antisocial attitude.
Ther had bald head and he had known for his bad personality						
15	M26	F26	Normal	6 sons	No aberrations	No known health ailments
There occur normal gender development showing no signs of aberrations.						

Table 3. One male and Female and having balanced family son and daughter

S.No	One male one female ameliorated					
	Male	Female	Living Standard	Off spring	Family situation	Theory and its man oeuvres
1	M8	F11	Normal	1Daughter +1 son	Ameliorated	Amelioration possible.
2	M9	F12	Normal	1Daughter +1 son	Ameliorated	Amelioration possible.
3	M10	F13	Normal	1Daughter +1 son	Ameliorated	Amelioration possible

Subscripts M and F signify individual male and females involved in the case studies here.

New Prismatic gender blacig a Godly solution

The study on aberrations enabled fixing factors, which become crucial in development of mis balance in the families brought out in Table1 through Table 3. The author brought new perfections in the original discovery of the gender theory. Under beyond study author developed new prismatic gender balancing in the families, which enable acquiring multiple benefits.

Designer baby by choice but not by chance

After bringing Godly solution of balancing genders in such mis balanced families it became obvious for this researcher brought designer baby by choice and not by chance. A child care for developing child from zero to hero was brought.

Fact about about bad personality

Author also developed the circumstances where initial setbacks cause mental disorder of intial exposure that makes bad personality.

New initiative of gynecological improving personality manoeuvres

The beyond studies brought preconceiving medical advisory, medical care of child growing in mother’s womb, going for cesarean delivery for avoiding any kind of biological shock to the baby and providing good initial exposures to protect baby from

becoming affected by bad personality traits. Developing good enhanced personality to manage unforeseen situations occurring due to exogamic and indogenic cloud forming problem was enforced. The study also brought measures to set life courses of mental and skeletal disabilities in persons in families to have their own means of taking cares at later part of lives.

There exist external factors that lead to clouds of causing problems of concerns, resulting in perplexing situations. These include 1 unreasonable demand, 2 uncertainty, 3 unclear priorities, 4 unnecessary meetings, and last-minute panics, which occur in office workings. On these lines many parallel cloud forming situations can occur unexpectedly. Furthermore, personal body factors growth accentuated by overcoming a wide range of hypo and hyper situations that disrupt the balance of essential electrolytes such as sodium, potassium, calcium, magnesium, chlorides, and phosphorus. These ions are crucial for the functioning of interconnected sub-biological networks that facilitate production, consumption, and waste elimination. These advancements support and demonstrate potential improvements in challenging mental states, offering a way for celebrities to avoid future distresses.

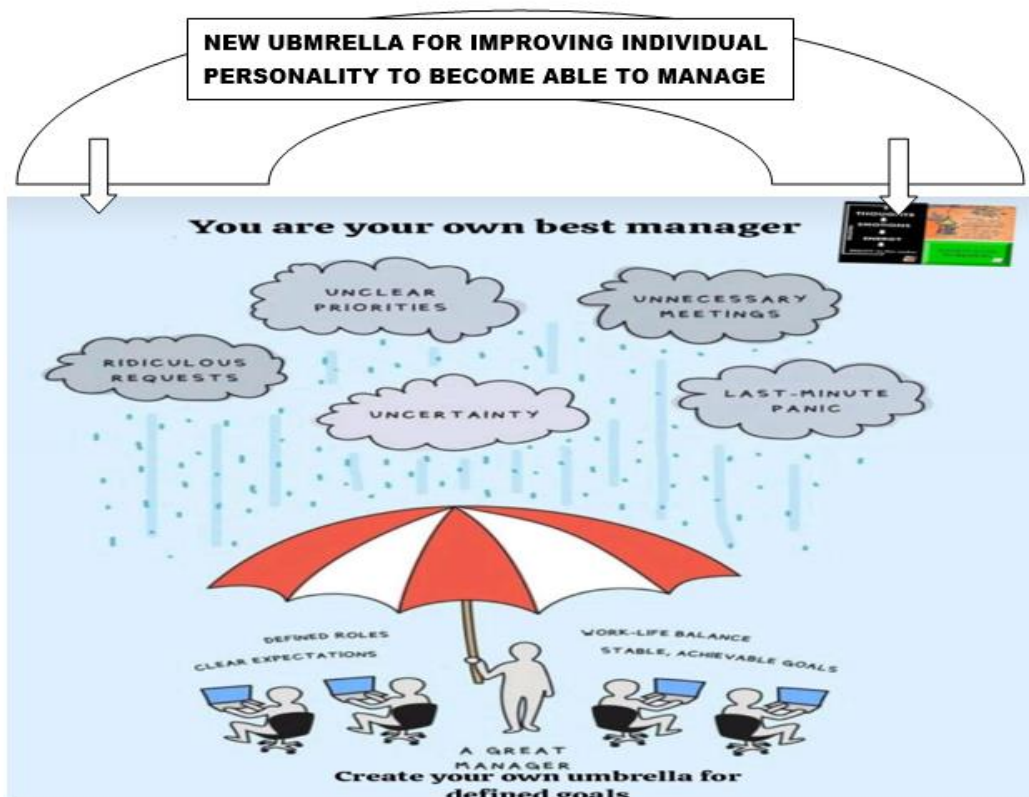

Fig1 New exogenic factors surrounding a cloud of worries broaden the amplitude of electrolyte disorders. It enables \int to create their own umbrella for defined goals.

Situation about the accomplishment of World Economic Forum appraisal reports

Recently World Economic Forum released its report on gender gap index in the global perspectives on June, 15, 2024, which displayed lack of meaningful wide spread change since last edition of 2006, effectively slows down the rate of progress to achieve parity. Based on the current data, the report cautioned that it will take 134 years to bring full parity after 2030 in accomplishing the Sustainable Development Goals (SDG) target. The Gender Gap Index showed that while no country had achieved full gender parity, 97% of the economies included in the report had closed more than 60% of the gap, compared to 85% in 2006. The India's slipping to lower level was attributed to slight declined in education and political empowerment, and some improvement in economic front. While shares of women in primary, secondary and tertiary education is high by 17.2 % and general believe that girls education will improve parity will not happen to be true. The girl interants acquire professionalism render them get problematic with some genetal disorders that leads to cause gender parity gap. Thus, genetic consideration reveals real fact about the gender gap parity. The present study makes scientific backing and developing appropriate initiatives to bring the gender gap by overcoming mis gender balances in individual families. Thus, general believes that education of girl children will overcome gender gap is not likely to happen because of natural process and inclination for acquiring professionalisms in girls, which intricate lot of gynecological and UTI disorders. This fact is revealed by sliding of Inda by two steps lower in bringing parity of gender gap Index.

Discussion

The study following pondering situations brought results of eminence values and advances of gynecological concerns. The following discussion is devoted to bring ratifications of sub sections of various aspects in the following part of the manuscript.

The study focused reduction of atrocities towards women and girl children

The study brought gender balanced families thereby enabling having gender balanced group moving out at occasions that will discourage miscreants not to venture doing atrocities towards women and girl children in moving out side on travel during trades and fares etc. Studies had substantiated this facts [1].[7].

Taking out of blind belief in public prevalence of mis balances in genders of families

The prismatic gender balancing has proven to bring Godly solution and overcoming many blind believes on getting godly blessing for such developments by people, in general.

Bringing prismatic gender development was a Godly solution

Prismatic gender balancing brought improvement in existing situation of helplessness to new way of empowerment of global gentry.

Linking of genetic health ailments with genders

The study on pondering situation presented novel method and actual data on human genetics that enabled linking gender linked health ailments. This fostered a diagnostic advancement in medical sciences. These disorders could get easily eradicated from the scene or treated by medications.

Prismatic gender balancing ensures natural resources utilization and advancing science and technology

The prismatic gender balancing brings search which involves undue repetitions. This aspect was brought by the author in recently held Unites Scientific Forum in Global Phamaceutical Congress 2024presented for Switzerland.

Genetic measure to have manoeuvres on devising populations by individual countries in view of developing situations

Some countries get blamed for their huge large populations at the same time there have been situation of shortages of working population to take up continuation of developing plans and projects. The prismatic gender balancing will enable countries under both difficult situations. This is a wonderful research of global concern and interests.

Study sets new policy and paths for fostering sustainable development goals of United Nations

Although the World Economic Forum (WEF) layed stress on general scenario of gender balance parity, which gets complex to reveal real situations and setting right policy issues. In this situation the prismatic gender mis balanced overcoming families provide immediate relief and benefit to such families right from the day one it is brought in adoption. It requires quick dissemination of the advancement in gender theory and associated emerging benefits.

The prismatic gender balancing appears as panacea advancement in bring decency towards women and girl children and enabled world situations in grip the bad situations arising by the bad scenarios.

The study had reported plentiful areas of advancements in human biology which will facilitate bringing new healthy world. This is a unique and advancement in human biology.

New genetic improvement in personality of mentally retarded and physically disabled individuals to have better present and future life courses

In study [16] author brought new genetic innovative initiative to improve the life courses of mentally disordered as well as physically disable individuals to have their future life course stakes to take their cares after advancements in age. Such gentries will have new hope of better life course of present and future, which had been rather highly pitiful. The new initiative will bring social relief to other members of family, as their partners coming under the new initiative will be all time becoming new accompaniment to take care of them during good as well as bad time. The initiative will create new genetic support for the future as well by enabling them have their own children. The prismatic gender balancing will be highly useful to such gentries.

Conclusion

The study on pondering situations on well-known deep cas by case study enabled fixing factors which cause aberrations in expected results of original gender theory, enabled bringing new perfections and bringing many innovative advances in human biology. The study enabled development of prismatic gender balancing in the Genetic Sustainability Conservation Fasting to bring new healthy world, bringing designer baby by choice and not by chance, which predominates in population development. The study created overcome development of bad personalities and brought improvement in the personality which get created by exogenic and indogenic problem creating worryful clouds get enabled mange such unforeseen situations. The study enabled bring several initiatives to overcome genetic disability and did set the appropriate policy and path that will enable accomplishing, at the earliest and quickly set objectives of Sustainable Development Goals of the United Nations. The study brought innovative advancements to improve present and future life courses for acquiring good living. This is a landmark genetic improvement.

Thus, all the innovative developments have been Godly solution providing many life relieves in human biology.

Declaration of no conflict of interest

Author duly declared that there existed no any conflict of interest either for authorship or offering any financial support.

Acknowledgement

The author duly acknowledged the support of cited references used and cited in the study.
